

Valparaiso, Indiana 2015

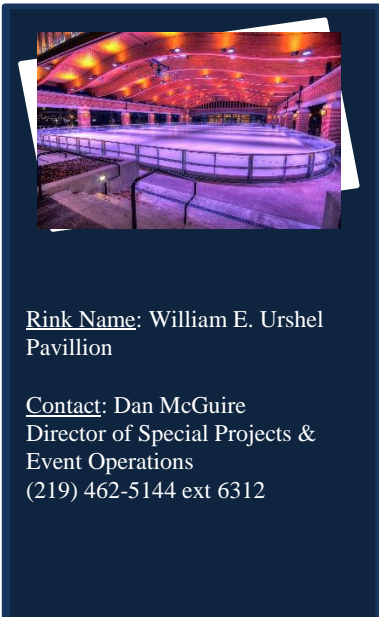

In 2013 Valparaiso Parks was in the planning stage of making major upgrades to expand their Central Park area including an amphitheater, general lawn area, activities building, and the multipurpose ice rink pavilion. Everything Ice was brought onto the design team to function as the ice rink specialty consultant. Everything Ice was an integral part of the team put together by Design Organization and assisted in many areas of the project outside of the ice rink.

Everything Ice worked closely with the General Contractor to ensure the project was done efficiently and completed on schedule. As the ice rink contractor, Everything Ice provided and installed a new multipurpose concrete rink floor along with the refrigeration package and ice rink accessories. The ice rink pavilion is the highlight of the Central Park expansion project. It is the first ice rink in the general area.

Scope of Work

- Provide and install a fully self contained air cooled chiller and pumps including start up and commissioning
- Provide and install sub-soil heating system including heater and pump
- Provide and install rigid rink insulation and vapor barriers
