**Peak Performance
Unsurpassed Life**

Rapid Ice is a high performance piping system for ice making with a refrigerated concrete multi-purpose rink floor. Our experienced team uses the most sophisticated and reliable equipment that provides the most level and consistent concrete flatwork.

Our specialized polymer tubing works efficiently with all secondary rink fluids. The spacing and heat transfer surface area can easily handle the highest heat load demands. Each system is engineered to provide uniform flow and temperature throughout all points on the skating surface.

Ideal for multi-purpose concrete floors. *Rapid Ice* can be installed by Everything Ice in a turnkey installation. From the largest most demanding arena, to the small recreation rink with multi-purpose community use, *Rapid Ice* floor excels in performance and long-term reliability.

Non-profit hockey groups with access to volunteer labor can benefit too! You provide the volunteer labor, and we supply you with easy-to-read blueprints and supervision. Each *Rapid Ice* system is engineered for your site and your specific operational format. We design the system to the flow and heat transfer requirements of your facility.

Concept to Completion - Total Responsibility
